Munich is moving toward climate-neutral energy under its "München klimaneutral 2035" strategy, aiming to be 100% renewable in electricity and 80% renewable in heating by 2035.

The outskirts of Munich feature utility-scale solar parks with multi-megawatt battery storage systems. These support SWM's renewable energy targets and stabilize the Bavarian grid.

With a visionary perspective, the master plan pursues the long-term goal of covering around 25 percent of the city's electricity consumption through inner-city solar systems. In order to ...

In conclusion, Munich is a suitable location for generating solar power year-round due to its temperate climate and varying seasonal sunlight conditions.

At Munich Green Projects, we manage complex, mission-critical projects that support the energy transition across Germany and Europe. Below are examples of our completed work, showcasing our ...

Photovoltaic expansion increased significantly in the first half of 2023. With a photovoltaic addition of over 10 MWp, more PV capacity was added in Munich in 2023 than in 2020 and 2021 - ...

Voltaro is the independent partner for solar and green energy - from consulting to operation. With a satellite-based building analysis, owners receive a free overview of the economic ...

By the end of 2024, the country had installed a total of 105 GW of photovoltaic capacity, achieving a twofold increase in just five years. This remarkable accomplishment was presented by ...
