- Together, utility -scale solar and wind generation accounted for more power than coal generation. - Solar overtook hydropower to be the second -largest source of renewable energy ...

Lawrence Berkeley National Laboratory compiled and synthesized empirical data on the U.S. utility-scale solar sector.

Solar accounted for 58% of all new electricity-generating capacity added to the US grid through the third quarter of 2025, with more than 30 GW installed. Solar and storage, combined, ...

Nearly 38,000 MW of planned generation capacity developments were canceled in 2024. Solar accounted for a plurality (43%) of the cancellations, and wind and natural gas projects accounted for ...

Solar PV is projected to lead all energy generation technologies with \$500 billion in expected investment. However, analysts note that spending remains concentrated in specific regions ...

Future year projections are derived from bottom-up benchmarking of PV CAPEX and bottom-up engineering analysis of O& M costs. The year 2023 reflects the most recent historical data, derived ...

Spending on low-emissions power generation has almost doubled over the past five years, led by solar PV. Investment in solar, both utility-scale and rooftop, is expected to reach USD 450 billion in 2025, ...

Hydrogen investment is expected to reach US\$8bn in 2025, nearly double the previous year, although some schemes have been cancelled or delayed. China, Europe and the US lead ...
