The production of solar power is in principle also dependent on the weather. In the EU Directive, however, it has been agreed not to apply normalization for solar power.

The Dutch PV Portal has been created to provide publically accessible information on solar energy in the Netherlands, based on scientific research performed by the Photovoltaic Materials and ...

Provisional estimates from Dutch New Energy Research indicate the Netherlands added 0.54 GW of residential solar and 1.54 GW of C& I and large-scale solar last year, taking the country's ...

Nearly 80% of solar power installed in the Netherlands in 2017 was for small systems of less than 10 kW, a large part being rooftop Solar PV. Larger systems over 500 kW accounted for just 6.9% of the total.

Solar deployment in the Netherlands is slowing amid grid challenges and policy shifts. This piece explores capacity trends, incentives, and innovation efforts.

Our new article dives into the prospects for ground-mounted solar, the status of the SDE++ scheme, and the challenges and opportunities related to grid constraints.

Government targets are clear: by 2030, 70% of all Dutch electricity must come from renewable sources, from offshore and onshore wind turbines to solar panels on roofs and in solar parks.

Although it has half the population, the Netherlands has four times more solar capacity than Canada, and that's not by accident. CBC's international climate correspondent Susan Ormiston...
