-----

A cargo ship moving silently through inland waterways, powered by the sun. It may sound like something out of a sci-fi novel, but it's already slicing through German canals -- and setting a ...

With 192 solar panels installed, the Blue Marlin can generate up to 37,500 kilowatt-hours (kWh) of electricity each year. For the first time in inland shipping, this solar energy is not only used ...

The algorithm was evaluated using a ship model equipped with a hybrid power system that included a generator, energy storage system, solar cells, service loads, and a propulsion system.

The term SHIP (solar heat for industrial processes) or SHIPs (solar heat for industrial plants) refers to the use of collected solar radiation for meeting industrial heat demands, rather than ...

Dutch solar innovator Wattlab and German inland shipping giant HGK Shipping have teamed up to launch the world's first hybrid solar-powered inland vessel as part of an ambitious...

In a groundbreaking shift towards sustainable maritime transport, the Blue Marlin debuts as the world's first inland vessel to harness solar power directly for propulsion, setting a new ...

MV Vertom Tula is yet another remarkable piece of green shipping innovation coming from the Netherlands. The vessel itself is the newest to join the fleet of Dutch operator Vertom, and the ...

This inland vessel, jointly developed by Dutch renewable energy company Wattlab and Germany's HGK Shipping, has been hailed as a "solar-powered marvel in the shipping industry."
