-----

Provided is a solar-powered water heater, comprising: a water storage container (1), a solar panel (2) used for converting solar energy to electrical energy, and a heating assembly...

U.S. Patent Publication No. 2010/0187219 describes an energy management system wherein a controller is connected the power consuming features of the water heater, including electrical heating...

The purpose of the invention is to create a solar service water store by simple and economical measures, so that optimum use is obtained from the energy from the solar collector circuit under ...

Heat energy storage systems described herein can be used for long-term storage of large amounts of thermal energy. In some cases, such systems receive electrical energy from renewable ...

The main goal of this study is to comprehensively explore the exciting water-based storage systems (including ice and steam) in terms of technical advances, economic growth and ...

A concentrated solar power storage system and method convert water into water vapor by the solar thermal energy, and the water vapor further operates a hydroelectric power generation system with a ...

The collective efforts of various patents contribute to a robust framework for advancing buoyancy energy storage technology, ultimately aimed at providing cost-effective and sustainable ...

Patsnap Eureka AI that helps you search prior art, draft patents, and assess FTO risks, powered by patent and scientific literature data.
