-----

A 47-unit mixed-income, solar-powered housing complex is coming to the South Loop. A.J. Patton's 548 Capital won city Plan Commission approval to move forward on the \$22 million ...

Large solar farms in the Sahara Desert could redistribute solar power generation potential locally as well as globally through disturbance of large-scale atmospheric teleconnections, according to simulations ...

It offers several advantages, including increased energy efficiency and improved power generation from solar panels. This review highlights some of the key advancements and challenges ...

The project will be solar powered, energy efficient, include electric vehicle (EV) charging stations, 15 market rate and 32 affordable housing units to benefit families and professionals that would normally ...

implemented with a small size 50 Watt (W) Monocrystalline Photovoltaic (PV) panel. The system's performance is monitored at different tropical weather conditions. In addition, the output power is ...

Project scope of work: Gregory Ramon Design Studio is the architect of record for this 80,000+ SF adaptive reuse project converting an old printing press building into a mixed-income, primarily ...

SVP's primary objective of the proposed project is to shift the electrical load demand that is currently being seen on the South Loop Circuit to the East Loop Circuit to increase capacity and system ...

We're excited to be leading the design effort for this transformative adaptive reuse project that will create high-quality, affordable, sustainable housing in the south loop area.
