Tajikistan aims to add up to 1,500 MW of solar and wind capacity over the next two years, targeting renewables to comprise 10 percent of its energy mix by 2030.

The existing electrical transmission and distribution systems of Tajikistan, designed in the 1970s during the Soviet era, are also being upgraded and expanded, allowing transmission of power from ...

How can communication base stations maintain uptime in off-grid areas while reducing carbon footprints? Over 30% of global cellular sites still rely on diesel generators--costly, polluting, ...

Tajikistan will build solar and wind power plants with a capacity of 1,500 megawatts in the next 24 months, Tajikistan's Minister of Energy and Water Resources Daler Juma said at the COP29 ...

In the Sughd region, Tajikistan is constructing its first large-scale solar power plant with a planned capacity of 200 MW, marking a significant step toward expanding the country's renewable energy ...

Historically, Tajikistan relied on imports from its Central Asian neighbours to make up for seasonal electricity shortages. But it was disconnected from the Central Asian Power System (CAPS) in 2009 ...

In Tajikistan's broad valleys, where mountain winds carve through the Gissar and Khatlon plains, air is no longer just weather--it's becoming a resource. Long known for its rivers and ...

Discover how hybrid energy systems, combining solar, wind, and battery storage, are transforming telecom base station power, reducing costs, and boosting sustainability.
