Examples of these that are available in Thailand include the SCB Green Ecosystem, which partners with distributors of solar cells and the Krungthai-Go Green, which supports energy ...

For Thailand to go net zero by 2050, it needs around 250 GW of solar power. That number currently stands at just 3.78GW [and projected to reach 6.97 GW by 2030], so to reach this ...

Thailand's solar power sector enters a structural turning point in 2026, shifting from cost-saving installations to a core pillar of the national power system.

Solar energy in Thailand has crossed the line from a promise to a profitable imperative. Costs of renewable energy sources are now lower than those of coal and competitive with gas, with ...

Thailand is developing a community-based solar project aimed at enabling local communities, rather than large-scale developers, to host solar farms.

Going green could soon get a whole lot easier -- and cheaper -- for Thai homeowners as the government gears up to dismantle red tape blocking access to solar energy.

The decision was approved by the National Energy Policy Council on 27 October 2025 and sets the stage for community-level solar farms to bolster local energy security and reduce ...

Since a new policy supporting rooftop photovoltaics (PV) will be launched in Thailand, this study investigates the economics of utility customers' investments in rooftop PV (values of bill ...
