Solar photovoltaic (PV) systems will play a crucial role in meeting the United States' climate and energy goals. Their affordability, ease of installation, and versatility have made them the fastest ...

When solar panels, which typically have a lifespan of more than 25 years, reach the end of their lives and become a waste stream, they must be managed safely. Find information here about ...

The U.S. Department of Energy is supporting various efforts to address end-of-life issues related to solar energy technologies, including recovering and recycling materials used to manufacture PV cells and ...

Not only does solar power receive tax subsidies, but it has also garnered sizable federal loans, particularly during the Obama-Biden administration. Solar plants are touted to operate for ...

Due to the lack of domestically assembled solar panels using American components, the groups are proposing to waive their required use through Dec. 31, 2025. The "buy America" ...

In reality, the US needs solar panels on about 700,000 acres of land in order to meet the administration's goal of transitioning the nation to 100% renewable energy by 2035. At the present...

Dramatic improvements to solar technologies and other clean energy technologies have enabled recent rapid growth in deployment and are providing cost-effective options for decarbonizing the U.S. ...

Paradoxically, the states most likely to do this are some that would greatly benefit from solar power, like Oklahoma, Kansas, and Nebraska. This article will list all the states with the largest ...
