In an historic first, solar power generated more electricity than any other source in the EU last month. New data from energy think tank Ember shows that solar accounted for 22.1 per cent of...

In a historic milestone for clean energy, solar power became the leading source of electricity in the EU for the first time in June 2025. New data from energy think tank Ember reveals ...

Solar electricity production in Europe during the first quarter of 2025 was up by over 30% from the same months in 2024, setting the stage for full-year record performance from the region's ...

Solar generated 22.1 per cent of the EU's electricity last month, up from 18.9 per cent a year earlier, as record sunshine and continued solar installations pushed output to 45.4 terawatt...

EU solar power output grew 21.7% (i.e., by 54 terawatt-hours, TWh) in 2024, expanding from 9.3% to 11.1% of total generation - a trend mostly driven by new capacity additions. Solar plants ...

Europe is on track to achieve record solar power generation in 2025, with significant increases in solar energy's share of the electricity mix across multiple countries.

Europe reaches historic highs in solar generation, surpassing sources such as nuclear and wind power for the first time. Increased installed capacity and favorable weather conditions are driving record ...

For the first time, solar was the largest source of electricity in the EU last month, supplying a record 22 percent of the bloc's power. At least 13 countries saw solar output hit a new monthly high ...
