That means even higher wind power generation totals can be expected going forward, ensuring that China will retain its position as the global wind sector leader.

Annual global wind generation capacity additions (GW) forecast to 2030. Additional charts broken down by region (North America, Europe, and China) and further split between onshore and ...

Our data is checked and revised over a rolling period of six months. We offer one-, two- or three-year update packages on an annual, bi-annual, quarterly or monthly basis. The Wind Power can also ...

Share of wind power in electricity generation and consumption. The world's installed wind power capacity now meets well over 10% of global electricity demand - and much more than nuclear ...

Also includes information on each country's actual yearly production of wind-generated electricity, as well as the amount of electricity generated in offshore wind farms as compared on onshore farms.

Multiple sources report wind alongside solar as the dominant driver of China's clean generation growth: Ember and others say wind and solar together supplied roughly 18% of China's ...

New wind power capacity of 87 GW was installed representing a 9.9% increase from last year. Accumulated net capacity of in-service wind turbines increased to 561 GW. The total capacity of all ...

Change in energy generation relative to the previous year, using the substitution method and measured in terawatt-hours.
