As set out in the " Clean Power 2030 Action Plan ", LDES is critical to achieving this government's Clean Power 2030 ambition, which will in turn help us to develop homegrown energy ...

Designed as a fully decarbonized and electrified zero-emission facility set to be powered by the renewable wind farms of the UK Irish Sea region, MESH is expected to be the UK's largest ...

On 10 October 2024 the UK Government gave the green light to a cap and floor scheme to help bring long duration energy storage (LDES) projects to market. LDES projects include pumped storage ...

There is a range of different energy storage technologies in development, which includes flow batteries, mechanical devices (such as pumped hydro, liquid air and compressed air), thermal storage and ...

Long-duration energy storage technologies store excess power for long periods to even out the supply. In March 2024, the House of Lords Science and Technology Committee said ...

Kelly Loukatou, one of the ESO's energy insight leads, considers the role energy storage plays in the current energy landscape and how this is likely to develop. Energy systems need to continuously ...

This report summarises the analysis and findings from the EINAs across the energy storage sub-theme, focusing on storage durations between 4 - 24-hours, including lithium-ion batteries,...

Ofgem has launched a new cap and floor investment support scheme, unlocking billions in funding to build major Long Duration Electricity Storage projects for the first time in 40 years.
