Solar and battery storage are expected to lead new US generating capacity additions in 2025, says the US Energy Information Administration (EIA).

This event will bring together key stakeholders from across the region to explore the latest trends in energy storage, with a focus on the increasing integration of energy storage into ...

The U.S. plans to add 97 GW of power in 2025, with solar and storage leading the charge. Here's how renewables are reshaping the energy mix.

"Despite regulatory uncertainty, the drivers for energy storage are strong and the industry is on track to produce enough grid batteries in American factories to supply 100% of domestic ...

Most big battery stations online and under construction are lithium-ion systems designed to discharge up to four hours of energy storage. They are frequently installed together with solar ...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...

Wood Mackenzie projects Q4 2025 will set a record for the residential sector as customers accelerate installations ahead of the Section 25D tax credit expiration. The Community, ...

The underlying motivation for DOE's strategic investment in energy storage is to ensure that the American people will have access to energy storage innovations that enable resilient, flexible, ...
