Soldering 18650 batteries requires precision and safety measures to avoid overheating, which can damage cells or cause leaks. Use a temperature-controlled iron (300-350°C), high-quality ...

This post shows the steps involved in making a 2S pack with 21700 cells. This guide is also relevant for constructing with 18650 cells.

This guide provides a deep dive into everything you need to know about correctly soldering multiple lithium batteries together, whether you're building a custom battery pack for your e-bike, ...

To be able to solder lithium batteries, you will need an extremely powerful soldering iron of 100 watts or more. A high-wattage soldering iron can solder much faster than a cooler-running one, ...

In 2025, more makers than ever are looking into how to solder 18650 batteries together for custom power solutions. But here's the thing: while it's possible, it's also something you need to approach ...

Learn safe techniques for Soldering Li-Ion cells. Step-by-step tips, benefits vs spot welding, and advice for building reliable battery packs.

Tinning: Heat the terminal with your soldering iron, then apply a small amount of solder directly to it, creating a thin coating that helps with future connections. Positioning: Arrange your cells in the ...

Yes you can solder 18650 cells to make your own battery pack. There's no need to buy an expensive welder. Here I show you how I made a 6 cell pack in series....
