What will Victoria do about coal-fired power stations?

A balance of renewable energy generation and storage will be required to replace retiring coal-fired power stations and ensure Victoria's electricity system is affordable, reliable, safe, and sustainable. Actions include: Building energy storage - like the Victorian Big Battery - to help provide reliable renewable energy throughout the transition.

How many energy storage projects are there in Victoria?

773 MW of commissioned energy storage capacity and 21 utility-scale storage projects with a combined capacity of 2,326 MW under construction or undergoing commissioning at 30 June 2025. Figure 4: Emissions from electricity generation in Victoria, 2013/14 to 2024/25

How many large-scale storage systems does Victoria have?

Victoria has 12 commissioned large-scale storage systems and 3 in commissioning - with a total output capacity of 1028 MW and storage capacity of more than 1.7 GWh. Storage capacity = how much total energy is stored in each battery. Output capacity = how much energy a battery can provide at a given time.

Why is Victoria a good place to store batteries?

Victoria is the home of big batteries and has legislated storage targets of at least 2.6 GW by 2030 and 6.3 GW by 2035 to provide crucial support for more renewable capacity. Storage is a vital part of our electricity grid. In the future, much of our energy will be generated closer to where it is used and the way we use it will be more efficient.

Low-cost brown coal power stations have dominated Victoria's electricity supply for many decades, and they still do. It was the low cost of this technology that caused the State Electricity ...

In summary, a synthesis of these factors establishes the framework for understanding how electricity prices at energy storage stations are calculated, revealing the interplay between ...

The Ballarat Energy Storage System provides back-up power and grid stabilisation, vital to maintaining a reliable and affordable energy supply in Western Victoria.

As global electricity demand grows 3% annually (IEA 2023), Victoria's manufacturers are answering the call with cutting-edge storage solutions that act like a 'giant battery for the grid'. From solar farms to ...

Victoria power station energy storage electricity price

As each plant closes, Victoria must replace its electricity with renewable energy generation and storage. The electricity system will depend heavily on weather conditions when coal power stations close. ...

When needed, the energy storage battery supplies the electricity to the charging pile. Through the light-storage-charging system, this clean energy of solar energy is transferred to the ...

The firm capacity delivered by Victoria's energy storage targets will provide reliable, affordable and clean energy as Victoria's ageing and increasingly unreliable coal generation is ...

EnergyAustralia says investment in new storage - up to 1.6 GW by 2030 - will be "critical" as more coal fired power stations are closed.
