Lithium-ion companies have come out as the top-rated suppliers on a new long-duration energy storage (LDES) leaderboard, while CO2 Battery company Energy Dome is the highest non-lithium company.

Solar and wind energy systems require some means of saving power for times when the sun doesn't shine and the wind doesn't blow. Such approaches, from batteries to gravity, are ...

Global demand for energy storage is surging. Lithium-ion leads today, but new contenders like sodium-ion, flow, and gravity systems are shaping the future grid.

Here are ten notable innovations taking place across different energy storage segments, as highlighted in GlobalData's Emerging Energy Storage Technologies report.

Explore the Top 10 Energy Storage Trends in 2025. Discover how these innovations drive efficiency in the sector.

To solve this problem, groups like Noon Energy are developing batteries that store energy in carbon and oxygen instead of metals. To create these new batteries, scientists split CO₂ ...

Global energy storage additions are on track to set another record in 2025 with the two largest markets - China and US - overcoming adverse policy shifts and tariff turmoil.

Explore the Future of energy storage--discover key technologies, market trends, and innovations powering the clean-energy transition.
