In accordance with the reference data, the following countries and regions are included in the analysis: Australia, Chile, China, Democratic Republic of the Congo (DRC), Europe (EUR), ...

The majority of China's storage capacity comes from large-scale storage projects, such as hydropower with reservoirs on the Yangtze River and gigawatt-level battery energy storage ...

These next-generation batteries could be pivotal for everything from electric vehicles to grid storage and even electric aviation. This infographic ranks countries by their share of current ...

China Southern Power Grid (CSG) announced on May 26 the commissioning of the Baochi Energy Storage Station in Wenshan, Yunnan province -- a national pilot project and the first ...

In this article, we consider trade of three key minerals needed for batteries--graphite, lithium, and cobalt--among China and key global regions.

Historically, lithium production has been dominated by countries such as Australia, Chile, and China. However, the finite nature of these resources and the geopolitical complexities associated ...

There are many types of BESS infrastructure available including lead-acid batteries, lithium-ion batteries, flow batteries, high-temperature batteries and zinc batteries.

Non-Chinese companies (primarily Australia and UK-based) have recently acquired permits for lithium deposits across several African countries, signaling Western interest in securing ...
