The passive solar design of buildings includes consideration of their orientation to the sun and their thermal mass, factors which have been incorporated to a greater or lesser extent in vernacular architecture for thousands of years. Ancient Greeks, Romans, and Chinese were the first to refine and develop the basic principles of passive solar design, but European technological advances were largely abandoned after the Fall of Rome. It was not until the 20th century that interest in the principles of pas...

Roman homes weren't randomly built. They developed over centuries of local adaptation. The inhabitants had time to fine-tune how buildings responded to heat, sunlight, and seasonal winds.

Ancient Greeks, Romans, and Chinese were the first to refine and develop the basic principles of passive solar design, but European technological advances were largely abandoned after the Fall of ...

The solar panels on the villa's roof are flat and lie between traditional ceramic curved tiles. They cover 70 square metres (750 square feet) of roof, produce a maximum of 13 kilowatt ...

In the Roman baths, the solar heat assisted the hypocaust system of "mechanical" heating. The technology of the hypocaust is fascinating. The baths included boiling rooms with tanks ...

Explore how ancient Greek and Roman architects used passive solar design to harness sunlight for natural heating and cooling.

Ancient Roman technologies like hypocausts and solar heating can inspire modern sustainability efforts. Learn from the past to build a greener future!

Are you considering installing solar panels on your home? Our expert covers solar energy pros and cons and solutions for problems with solar panels on roofs.
