What is a container application?

Containers are a technology that allow applications to be packaged and isolated with their entire runtime environment. This makes it easier to maintain consistent behavior and functionality while moving the contained application between environments (dev, test, production) and across public, private, hybrid cloud, and on-premise.

What is a containerized mobile substation?

Containerized mobile substations are sheltered and address applications in challenging environmental conditions including areas with high pollution, high humidity, extreme temperatures or sand storms. Containers are easy to transport and fast to install, by reducing foundation works as well as installation and commissioning effort on site.

What is a dedicated host for Azure Container instances?

A dedicated host for Azure Container Instances provides double encryption at rest for your container data when the service persists it to the cloud. This encryption protects your data to help meet your organization's security and compliance requirements.

Can I use a dedicated SKU for production container deployments?

The default limit for any subscription to use the dedicated sku is 0. If you would like to use this sku for your production container deployments, create an Azure Support request to increase the limit. Using the dedicated sku is only available in API version 2019-12-01 or later.
