The Monasavu Hydro Scheme that was successfully commissioned in 1983 was the first of its kind for Fiji. With a generating capacity of 80MW and an annual energy yield of 400GWh.

Fiji produces nearly all of its electricity via two sources, hydroelectricity and oil. Hydroelectricity provides just below 60% of the power generated in the country, while oil-based generation provides about ...

One of them is the Fiji Nadarivatu Hydropower station, a 40-megawatt run-of-the-river project in a remote area of Viti Levu. The station has two vertical turbines that generate 103 gigawatts hours or ...

List of power plants in Fiji from OpenStreetMap

The Nadarivatu Hydropower Project on Fiji's Sigatoka River is a key renewable energy initiative, generating clean electricity for Viti Levu Island.

Fiji generates electricity primarily from hydropower, diesel, and solar sources, making its energy resources vital for sustainable growth and future needs.

Currently hydro power accounts for a large proportion of Fiji's renewable energy generating. However, scaling up other renewable energy technologies, such as solar, would diversify state's energy mix ...

The primary purpose of the dam is to produce hydroelectric power and it supports an 80 megawatts (110,000 hp) power station. To offset fossil fuel imports for power production on the island, the ...
