Does South Korea have a plan for long-term electricity supply & demand?

In February 2025, South Korea finalized its 11th Basic Plan for Long-Term Electricity Supply and Demand (BPLE). The plan makes some progress toward the country's decarbonization goals, reflecting calls to reduce fossil fuel dependency in the power generation mix while increasing the use of carbon-neutral energy.

How much energy storage does Korea need by 2035?

In the 10th Basic Plan, 3.7 GW (2.3 GWh) and 22.6 GW (125 GWh) of short- and long-duration storage are required by 2035, respectively. 24 According to this study, Korea needs 40 GW (182 GWh) of energy storage by 2035.

How can re be more competitive in Korea's electricity market?

Including external costs (i.e., those incurred in relation to impacts on health and the environment, but not usually reflected in prices) through a gradual transition to price-based pools, while drastically reducing coal-powered plants' free carbon allowances, can help make RE more competitive in Korea's electricity market.

Should Korea increase the share of clean electricity generation by 2035?

The results of this study suggest that expanding the share of clean electricity generation from 59% (under the 10th Basic Plan) and 65% (under the current policy scenario) to 80% (under the clean energy scenario) by 2035 would lower electricity supply costs and support the Korean government's goals for carbon neutrality and air quality.

While RE accounts for only 7% of total electricity generation in Korea, the new administration's "Renewable Energy 3020" has put ambitious target to increase RE share to 20% by 2030

"The possibility of a rate hike in the fourth quarter, during the off-peak season, should remain open." Even without the infrastructure investment, high generation costs remain a burden. ...

South Korea's recently finalized 11th Basic Plan for Long-Term Electricity Supply and Demand (BPLE) makes some progress toward reaching its decarbonization goals by reducing fossil ...

This analysis considers both front-of-the-meter and behind-the-meter energy generation and demand, with BTM generation, particularly from solar, expected to rise. This will reduce reliance ...
