What is the difference between `.size()` and `.length` ? Is `.size()` only for arraylists and `.length` only for arrays?

The Renogy 590W bifacial solar panel delivers higher efficiency and up to 7% more output, maximizing energy generation without increasing panel size. Easily install Renogy solar panels on flat roofs, ...

Same panel size as 540W/545W but gives higher output. Ideal for rooftops with limited space -- generate more units without adding extra panels. Get high-efficiency panels at a lower cost than ...

Shop at SunWatts to find low price solar panels that generate 590 watts of DC power. These modules can be grid-tied or used off-grid for residential or commercial renewable energy generation. ...

So, the size of `size_t` is not specified, only that it has to be an unsigned integer type. However, an interesting specification can be found in chapter 7.18.3 of the standard: limit of `size_t` `SIZE_MAX` ...

Size is defined as the number of elements in the list. The implementation does not specify how the `size ()` member function operates (iterate over members, return stored count, etc), as List is ...

In several C++ examples I see a use of the type `size_t` where I would have used a simple `int`. What's the difference, and why `size_t` should be better?

590 Photovoltaic panel specifications and dimensions The JA Solar JAM72D40-590/LB-ITS is a 590W n-type Double Glass Bifacial Solar Panel with a silver frame. Part of the Deep Blue 4.0 Series, the ...
