Yes, solar panels are still worth it for the vast majority of U.S. homeowners in 2026 and beyond, despite the end of the 30% federal solar tax credit for some systems. The primary financial driver is the cost ...

Today, electricity-intensive solar PV manufacturing is mostly powered by fossil fuels, but solar panels only need to operate for 4-8 months to offset their manufacturing emissions.

As of 2022, 263,882 solar workers were employed in the U.S. solar industry across all 50 states, Washington, D.C., and Puerto Rico. This represents a 3.5% increase (8,844 new jobs) since ...

Department of Energy

Solar energy is only available during the day. This intermittency limits its value for businesses and leaves homeowners powerless during grid outages or high evening electricity rates. ...

Solar projects are making it easier for Americans to choose solar energy to power their homes. Department of Energy Since 2008, hundreds of thousands of solar panels have been installed across ...

Solar energy is the fastest growing and most affordable source of new electricity in America. As the cost of solar energy systems dropped significantly, more Americans and businesses ...

Solar panel technology advances include greater solar cell efficiency and the use of new and more abundant solar panel materials.
