Discover why wind turbine blades wear out, how long they last, and what causes failure. Learn about maintenance, damage signs, and recycling options.

In the same way that you don't usually think about wind turbine fires, you probably don't think about wind turbine blades coming loose and flying off, either, but they do.

The researchers estimated that current annual amounts of metals shed from blades at operating European offshore wind facilities to be high enough that, when taken up by seaweed and ...

The structural collapse of a wind turbine blade can occur if the blade is subject to extreme loads, exceeds its designed strength, and/or as a result of degradation and fatigue of the blade elements, ...

An investigation is underway after wind turbine blades fell to earth in the grounds of a UK insurance giant. All three blades detached from the turbine at the offices of Aviva in Perth, Scotland.

Giant wind turbines keep mysteriously falling over, which shouldn't be happening. Production issues may be to blame for the increase in failures.

While towers and nacelles are largely recyclable, wind turbine blades pose a unique challenge. Typically 40-90 meters long, made of composite materials, and built to endure two to ...

Although 90% of wind turbine parts are recyclable, the blades remain problematic due to their fiberglass and epoxy resin composition, posing a sustainability challenge as older turbines reach the end of ...
