What does a wind turbine inverter convert?

The inverter is a power electronic converter that converts DC power into AC power by turning on and off semiconductor power switching devices. Wind turbine is a device for extracting kinetic energy from the wind and converts electrical energy.

Can a wind turbine run with an inverter?

You can connect a wind turbine to an inverter if it has the same voltage and has a DC output. Inverters convert DC to AC, so if the wind turbine already produces AC power it may not run with the inverter. This may or may not be the case. You can check your inverter manual or contact the manufacturer.

What is a wind turbine inverter kit?

Our wind turbine Inverter kits utilise the latest in 6 or 12 pulse AFE technology (25kW- 2MW) allowing for unity Power Factors to be maintained. Many wind turbines only generate at a fixed speed relative to the frequency of the grid either 50Hz or 60Hz. This limits the efficiency at lower wind speeds and may not be able to generate at all.

How much does a wind turbine cost?

A professionally installed domestic wind turbine will cost about \$8.50 per watt, so quite substantial. The average house will need about 5 to 10kW of generation capacity, so at the upper end you would need a capital outlay of \$85000!
