In this paper, we take the Supervisory Control and Data Acquisition (SCADA) data as the research object and research wind turbine health data purification, fault diagnosis model building, and...

This work was authored by the National Renewable Energy Laboratory, operated by Alliance for Sustainable Energy, LLC, for the U.S. Department of Energy (DOE) under Contract No. DE-AC36 ...

Data analytics identified that power converter and pitch system in wind farm emerged as leading contributors to failure rate and downtime across the years 2020, 2021, and 2022.

Real-time monitoring of operation status and predicting potential failures in wind turbines are indispensable requirements for the safe integration of wind power.

To ensure effective management of wind farms (WF), wind turbines (WT) are scheduled for preventive maintenance every 2500 to 5000 hours. However, relying solely on preventive ...

This is a practical documentation about wind turbine operations and maintenance (O& M) which describes how turbines are operated reliably, how maintenance is planned and carried out & ...

To make maintenance history accessible from the map: Click any turbine on the map to see its complete maintenance history and current status. To use your turbine map for operational decision-making: ...

Examples include operational impact assessments of turbines on air defense radar, weather and general aviation, analyses related to the role of wind energy in the U.S. electric grid, interactions between ...
