Zeta Energy Corp., headquartered in Houston since 2014, develops advanced lithium-sulfur batteries that offer triple the energy density of lithium-ion at half the cost. By eliminating critical materials, Zeta ...

Offering three times the energy density of today's lithium-ion batteries and at less than half the price per kWh, Zeta Energy's lithium-sulfur batteries are poised to change the way we think about energy ...

Together, we can unlock the power of lithium-sulfur batteries to transform energy storage for electric vehicles, grid storage, construction equipment, and more."

Zeta Energy has created the world's first and only successful lithium-sulfur battery! Offering three times the energy density of today's lithium-ion batteries and at less than half the price per kWh, Zeta ...

This will help us speed delivery of our battery technology. It combines the efficiency of lithium-ion batteries with the low-cost needed for long duration energy storage, creating the perfect ...

By eliminating the need for cobalt, manganese, nickel, and graphite, Zeta Energy simplifies its supply chain and reduces reliance on geopolitically sensitive materials. This approach ...

Zeta Energy's breakthrough in lithium-sulfur battery technology represents a significant step forward in energy storage. By comparison, traditional lithium-ion designs rely on costly metals ...

The Zeta project is scheduled to be operational in summer 2027. It is part of a broader shift across the state to develop infrastructure that can store and distribute renewable energy more ...
